

# RS2 Technologies

a family of access management hardware solutions

## Access It!® Universal.NET BADGE Option

The BADGE option captures pictures and signatures for ID card printing.

### The BADGE option includes these features:

- Live photo image capture (camera optional)
- Import stored photo images
- Signature verification capture (signature pad optional)
- Crop and size image and signature capture area
- Full featured, robust badge designer
- Dual-sided ID badge printing (printer optional)
- Bar code printing (WBF option required)
- ID badge magnetic stripe encoding
- Image “ghosting” for high security applications
- Live image verification using stored photos

RS2 Technologies has developed a family of access management software options that can be combined to meet a wide variety of applications. All options are seamlessly integrated with Access It!® Universal.NET for maximum flexibility and ease of use.

### BADGE Image Capture and ID Badge Printing Option

The BADGE option is a powerful, flexible and easy-to-use photo ID management option. The included ID badge designer creates custom badge designs to enhance your corporate image. Custom backgrounds, company logos and many font choices produce a professional and functional ID badge. BADGE is a system-wide (i.e., server-based, not client-based) option, so only one license is needed per system.

ID badges can be created for different departments, employees, and contractors, and can easily be assigned to access control credentials. Visual image verification can be activated to compare the badge photo of the individual with the stored ID photo to prevent unauthorized access. Photo ID badges can be printed in batches as well as individually, and may also be encoded during printing.

### Technical Specifications

Live photo ID capture using VFW (Video for Windows) or WDM (Windows Driver Model)

Photo ID image file importing (BMP & JPEG formats are supported)

ID Badge background pictures (BMP & JPEG formats are supported)

Live signature verification capture using optional Topaz T-L462-HSB-R

Signature image file importing (BMP & JPEG formats are supported)
