

APPLICATION CASE HISTORY

ACCESS MANAGEMENT SPECIALISTS

Haywood's Prescription for Access Control: RS2

Customer:	Haywood Regional Medical Center
Systems Integrator:	Intelligent Access Systems of North Carolina
Security Requirements:	A reliable, user friendly access control system that could be integrated with multiple systems such as video, badging, infant abduction, paging and guard e-mail notification
Solution:	RS2 Access It!® Universal

Haywood Regional Medical Center is a multi-disciplinary medical facility that provides superior, cost-effective healthcare for families in Western North Carolina. Haywood provides a full range of services, including critical, intensive and coronary care, and labor & delivery services through its Women's Care Center.

Although HRMC had existing access control and video systems in place, they had not only become obsolete, but were serviced by separate security firms, as was the center's infant abduction alarm system. Moreover, none of the three systems were integrated with each other. HRMC turned to Intelligent Access Systems of North Carolina and RS2 Technologies for the installation of a completely integrated access control system that incorporates the hospital's intercom system, guards' pagers, and e-mail notification. And, in the case of the Women's Care Center, the system integrates with the Infant Abduction System to automatically lock down key areas of the WCC in the event of a system breach. These and other security improvements merited a rating of Excellent from the Joint Commission.

Healthcare is a significant market for RS2. In addition to HRMC, RS2 access control systems can be found in hospitals and medical facilities in Florida, California, Illinois, Indiana, Nebraska, Missouri, New Mexico, Texas, Colorado and several other states.
