

APPLICATION CASE HISTORY

ACCESS MANAGEMENT SPECIALISTS

Pitt is Well Educated About Access Control

Customer:	University of Pittsburgh
Systems Integrator:	Securadyne Systems, Pittsburgh, PA
Security Requirements:	System must be compatible with existing hardware; software must interface with existing ID cards.
Solution:	RS2 hardware & Access It!® Universal software

When the University of Pittsburgh needed an access control system that would meet the special needs of its 132-acre, 70-building campus, they turned to RS2 Technologies. The installation was featured in an article in **Security Management Magazine**. The University Security Manager was so pleased with the system that he expanded it to control other devices: "We have door alarms, glass-break alarms, burglar alarms, and panic buttons. Any device that can send a signal, we have been able to tie into the system."

The RS2 system utilizes Pitt's multi-function ID cards, which, in addition to their ID and access control functions, are used by 25,000 students and 11,000-plus employees for functions such as meal plans, ATMs, etc. The RS2 system was ideal for the university's cluster server system, as it provides hot server redundancy and full fail over server protection for 24/7 system availability.

While Pitt is admittedly a very large campus, RS2 has also worked with very small campuses and everything in between. RS2 access control systems can also be found at Purdue University, Loyola, University of Texas – Brownsville, Anderson University, Indiana Wesleyan University, Valparaiso University, Rockhurst University, and many others.
